AGENDA

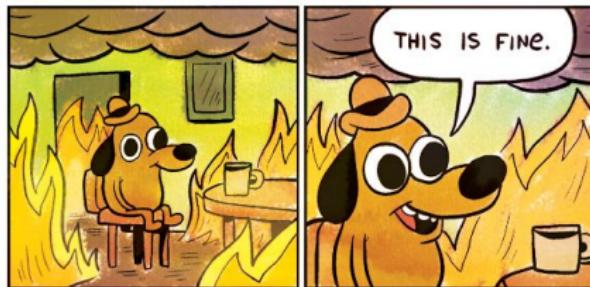

- Why MISP 3?
- The plan
- Considerations

WHY MISP 3?

> AN OUTDATED VERSION OF THE FRAMEWORK

- MISP is based on CakePHP 2.x
 - ▶ End of Security Support in **June 2021**
 - ▶ Maintained fork [github.com:MISP/cakephp.git](https://github.com/MISP/cakephp.git)
- CakePHP supports PHP version **<=7.4**
 - ▶ End of Security Support in **November 2022**

> TACKED ON MECHANICS

- MISP supports a wide range of use cases...
- ... meaning loads of feature-clutter the interface
- All options visible regardless of the user profile
- Lack of coherent page navigation

The screenshot shows the MISP web application interface. At the top, there is a horizontal navigation bar with links: Home, Event Actions, Dashboard, Galaxies, Input Filters, Global Actions (which is currently selected and highlighted in black), Sync Actions, Administration, Logs, and API. Below the navigation bar, on the left, is a sidebar with a tree view of categories like General, Events, Decaying Models, User Guide, and Help. The main content area is titled "Events" and displays a list of event entries. On the right side of the screen, there is a vertical sidebar with a list of global actions, including News, My Profile, My Settings, Set Setting, Organisations, Role Permissions, List Object Templates, List Sharing Groups, Add Sharing Group, List Sharing Groups Blueprints, Add Sharing Group Blueprint, Decaying Models Tool, List Decaying Model, User Guide, Categories & Types, Terms & Conditions, Statistics, List Discussions, and Start Discussion.

> SHORTCOMINGS DUE TO INITIAL DESIGN CHOICES

To list a few..

- Sub-optimal database structure
- Start with something small, build it out has its disadvantages
 - ▶ Attribute type, value not a first-class citizen
 - ▶ Logs all in one place
 - ▶ Indexing rework (performance and moving validation to the DB)
- Confusing mess of multiple graphing interfaces
- Files - Especially tricky with dockerised and load balanced setups
- Tagging

> THE ONGOING PLAN FORWARD

- Port of the codebase to a new stack
 - ▶ CakePHP 2.x → CakePHP 5
- Rework of old baggage
 - ▶ Database updates
 - ▶ Front-end libraries (Bootstrap, Graphing, ...)
 - ▶ Background jobs & Scheduled tasks
 - ▶ Purging old libraries

> PRUNING UNUSED / DEAD END FUNCTIONALITIES

- Populate using the templating system
- Deprecated export functionalities
- Discussion / Posts
- ...

STEP I - PREPARING THE GROUNDS

STEP I - PREPARING THE GROUNDS

Refactoring the codebase for improved portability using factories

- Framework-agnostic
- Reusable code for front and back-end
- Extracting and encapsulating specialised functionalities into libraries

STEP I - PREPARING THE GROUNDS

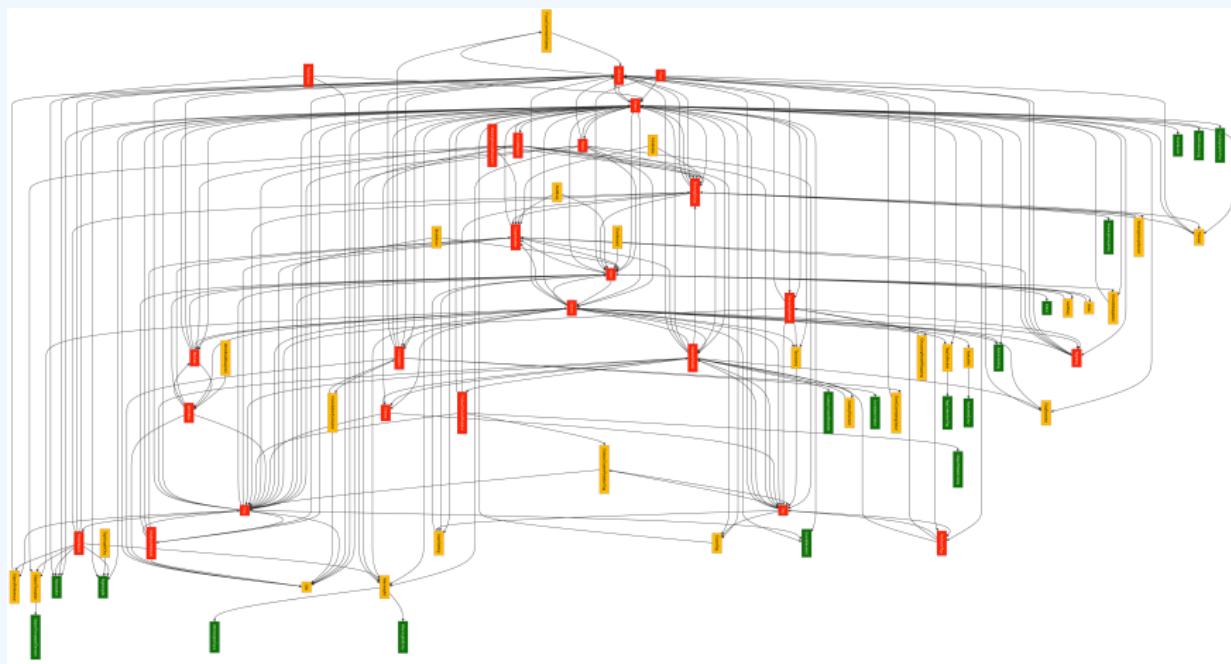

Setting the stage with Cerebrate

- Dev started in May 2020, built on MISP3's stack
- Application built on top of ported MISP libraries
- New UI laying the foundation for MISP 3
- Streamlined integration of new features into MISP3
 - ▶ Tagging, Inbox system, Settings, ...

STEP I - IDENTIFYING INTER-DEPENDENCIES

Migrate least connected part first

STEP II - PORTING THE CODEBASE

> STEP II - ROADMAP FOR A 3-WAVE PORTING

⌚ MISP 3.x

Task list Progress board Timeline + New View

Filter by keyword or by field

⌚ Todo 9
This item hasn't been started

- MISP #8881 TagCollectionTag
- MISP #8885 Inbox
- MISP #8886 ObjectRelationship
- MISP #8887 NotificationLog
- MISP #8890 GalaxyClusterBlocklist
- MISP #8891 EventLock
- MISP #8892 EventBlocklist

⌚ In Progress 1
This is actively being worked on

- MISP #8882 Sightingdb

⌚ Done 8
This has been completed

- MISP #8879 AdminSettings
- MISP #8880 WarninglistEntry
- MISP #8883 SharingGroups
- MISP #8884 ObjectTemplates
- MISP #8888 Noticelists
- MISP #8889 AllowedList
- MISP #8893 CryptographicKey
- MISP #9209 Authkeys

> STEP II - ROADMAP FOR A 3-WAVE PORTING

Wave 1 Least complex/inter-connected models

- ▶ E.g. Blocklist, Warninglist, Object-template, User

Wave 2 More glue relying on component already migrated

- ▶ E.g. Authkey, *-Tag, Taxonomy

Wave 3 The actual meat of the application

- ▶ E.g. Attribute, Event, Workflow

> STEP II - TEST DRIVEN DEVELOPMENT

```
$ composer test
> sh ./tests/Helper/wiremock/start.sh
WireMock 1 started on port 8080
> phpunit
[ * ] Running DB migrations, it may take some time ...

The WireMock server is started .....
port:                      8080
enable-browser-proxying:   false
disable-banner:            true
no-request-journal:       false
verbose:                   false

PHPUnit 8.5.22 by Sebastian Bergmann and contributors.
```

- Complementary to PyMISP test
- In-framework **Unit Tests** and **Endpoint Tests**
- Improved CI pipeline and enforced code standard

> CODEBASE MIGRATION: WHERE WE STAND I

Migration officially started in January 2023

The screenshot shows a GitHub commit history for a repository. At the top, it displays statistics: 333 commits, 2,467 files changed, and 5 contributors. Below this, a specific commit is highlighted:

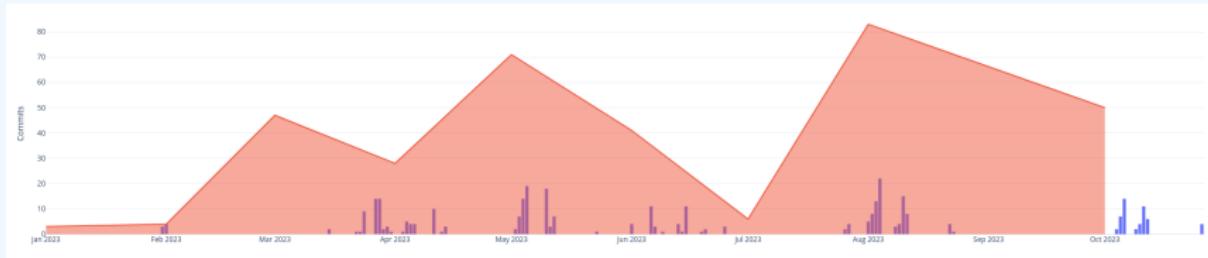

new: [3.x] initial skeleton added ...
iglokska committed on Jan 31

This commit is marked as **Verified** and has a commit ID of **35932db**. The commit message is "new: [3.x] initial skeleton added". The commit history table below shows numerous other commits, mostly from iglokska, all dated Jan 31, 2023, and all marked as "Verified". The commits are listed with their file names and brief descriptions.

- Around **27 tables** have been moved
- Some partially, others completely

Name	Last commit message	Last commit date
...		
<code>billingHeaders</code>	No depreciation notices	7 months ago
<code>glossary</code>	new: [3.x] initial skeleton added	10 months ago
<code>addressDesignation.php</code>	New: migration AddressDesignation model moved	10 months ago
<code>addressDesignation.php</code>	(bug) rename table for consistency	8 months ago
<code>AppTable.php</code>	No merge conflicts	3 months ago
<code>AvatarLogTable.php</code>	New: [3.x] initial skeleton added	10 months ago
<code>AvatarTable.php</code>	Add: app-unit tests	4 months ago
<code>CryptographicKeyTable.php</code>	No use -remove(dlg)	3 months ago
<code>EventBuddyListTable.php</code>	No: id	3 months ago
<code>EventTable.php</code>	Add basic crud app tests for sharing groups	5 months ago
<code>InteractionTable.php</code>	Add add basic user tests, remove contribute part code from ...	7 months ago
<code>JobTable.php</code>	drag: reference to use migration	last month
<code>LogoTable.php</code>	Add migrate command to test jobs	last month
<code>InvestmentReviewTable.php</code>	Add post notifications	3 months ago
<code>IndividualTable.php</code>	No: id	3 months ago
<code>ObjectTableAndScriptable.php</code>	No: properly validate requirements	3 months ago
<code>ObjectTemplateTableAndScriptable.php</code>	New: migrate object template	3 months ago
<code>ObjectTemplateTable.php</code>	No: parsing poor values	3 months ago
<code>OrganizationTable.php</code>	Add more tests, No bugs	5 months ago
<code>AvatarTable.php</code>	New: [3.x] initial skeleton added	10 months ago
<code>ServerTable.php</code>	drag: reference to use migration	last month

CODEBASE MIGRATION: LOOK AND FEEL II

The screenshot shows the MISP user profile for the user 'admin@admin.test'. The top navigation bar includes links for 'Users Index' and 'admin@admin.test', a search bar, and account settings. The main content area displays the user's details, including their ID (1), email (admin@admin.test), organization (GRCNAME), and role (admin). Under 'Email notifications', there are four options: 'Event published notification' (Yes), 'Daily notifications' (No), 'Weekly notifications' (No), and 'Monthly notifications' (No). Other settings include 'Contact alert enabled' (No), 'NIDS Start SID' (4000000), 'Terms accepted' (No), 'Must change password' (No), 'PGP key' (N/A), and 'S/MIME Public certificate' (disabled). Below these settings are two sections: 'Authentication keys' and 'Events'.

ID	1
Email	admin@admin.test
Organisation	GRCNAME
Role	admin
Email notifications	Event published notification: Yes Daily notifications: No Weekly notifications: No Monthly notifications: No
Contact alert enabled	No
NIDS Start SID	4000000
Terms accepted	No
Must change password	No
PGP key	N/A
S/MIME Public certificate	Disabled
Authentication keys	
Events	

CODEBASE MIGRATION: LOOK AND FEEL II

The screenshot shows the MISP SharingGroups Index page. The top navigation bar includes the MISP logo, a search bar, and user icons for View and Edit. The main content area displays a "New Sharing Group" form with tabs for General, Organisations, Instances, and Summary & Save. The General tab is active, showing sections for Local Organisations (with a dropdown placeholder "Select a local organisation") and Remote Organisations (with a dropdown placeholder "Select a remote organisation"). A table lists available organisations:

Type	Name	UUID	Extend	Actions
local	ORIONAME	7e9251c8-3b15-417a-9e92-a508479c5b4d	<input checked="" type="checkbox"/>	
remote	CERT-FR_1510	56bdf779-4ef8-4353-bd79-2bb65bce2212	<input type="checkbox"/>	

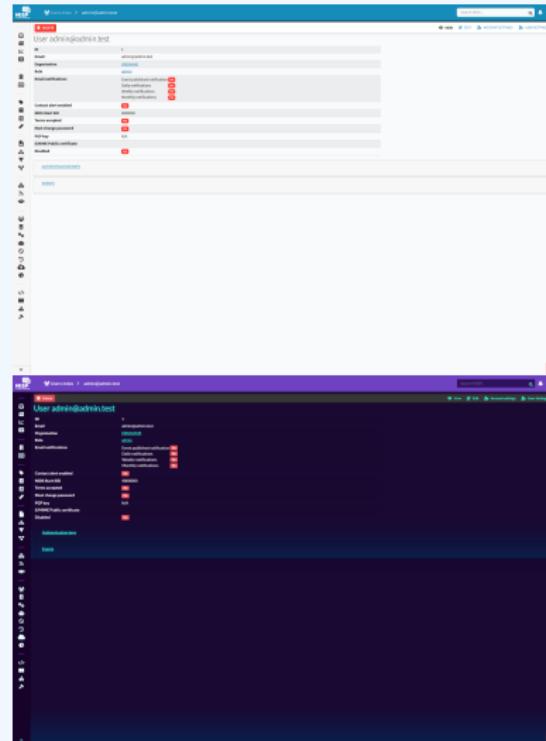

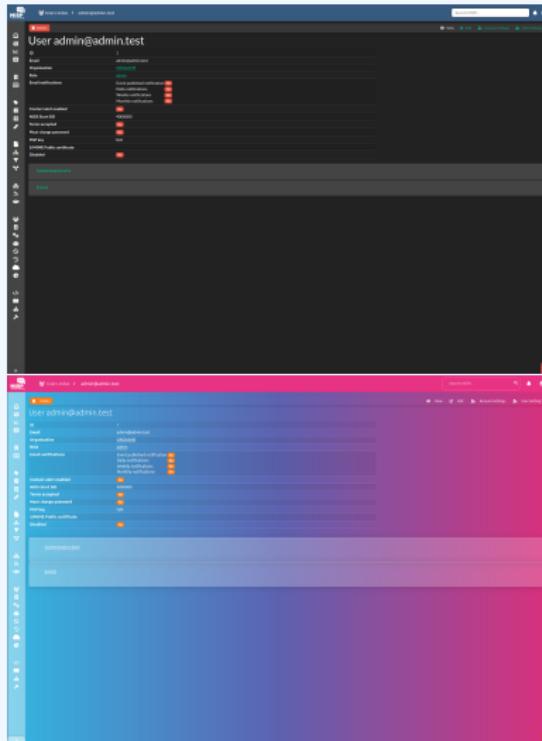

A "Next page" button is located at the bottom left of the table. On the far left, a vertical sidebar contains a large number of small, unlabeled icons, likely representing various MISP modules or functions.

CODEBASE MIGRATION: LOOK AND FEEL II

- Updating Bootstrap greatly improves aesthetics
- And allow us to integrate themes seamlessly

CODEBASE MIGRATION: LOOK AND FEEL II

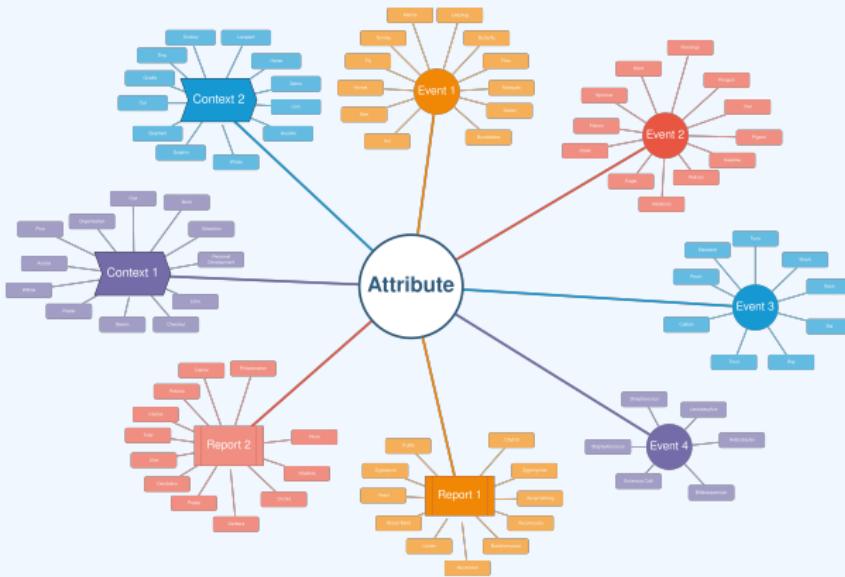

STEP III - THE TODOS

> REDEFINE HOW WE INTERACT WITH DATA I

■ Indicator centric perspective

- ▶ Unified view of everything we know about a given Indicator
- ▶ Allows us to take better decisions
- ▶ Enable users to manage their IoC working set
- ▶ Start an investigation more easily from a single indicator

> REDEFINE HOW WE INTERACT WITH DATA II

■ Unified search mechanics

- ▶ Code deduplication
 - ▶ Streamlined way to search for data
 - ▶ Opening up the full power of the API searches to UI users
 - ▶ Translation layer for the deprecated endpoints

REDEFINE HOW WE INTERACT WITH DATA III

- Refactor the Event view
 - ▶ Key Elements at first glance
 - ▶ Emphasis on the context (Insights, Taxonomies, Galaxies, Correlation, .)
 - ▶ Massive performance gains by moving to the composition of separate atomic endpoints
 - ▶ Unified graph interface
 - ▶ Sneak peak ? 😊

CONSIDERATIONS

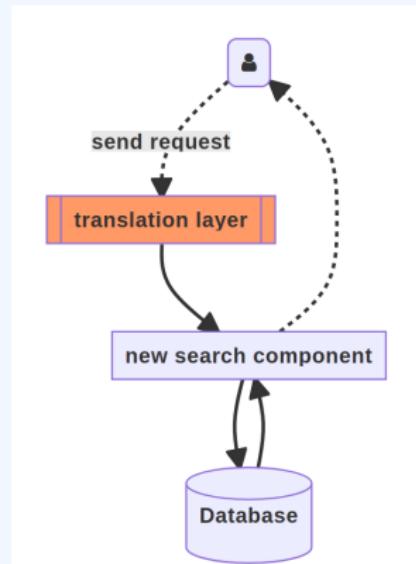

> MISP CORE FORMAT

- Created in **2012**, Officially became a standard in 2016
- **No breaking changes** since its birth, And we'll maintain this streak
- Format will keep evolving to support new functionalities

> API COMPATIBILITY

- The aim is to achieve a **near 100% compatibility** with the old API
- "Near" only due to the functionalities removed as a result of deprecation.
- Strategy: Mapping with a translation layer

> SYNCHRONISATION COMPATIBILITY

- API Compatibility means Synchronisation compatibility
- MISP 3 servers will be able to sync with MISP 2.4 and vice versa

BUT

- MISP **2.4 → 3**
 - ▶ Full support
- MISP **3 → 2.4**
 - ▶ Lossy when sharing new types of datapoints
 - ▶ E.g: Tags on Objects

> SUPPORT FOR MISP 2.4

- MISP 2.4 will be **supported for a limited time**
- **6 months** support post MISP 3 release
 - ▶ Potential changes/improvements on 2.4 to better support MISP 3 interactions

> MIGRATION SUPPORT FOR 2.4 → 3

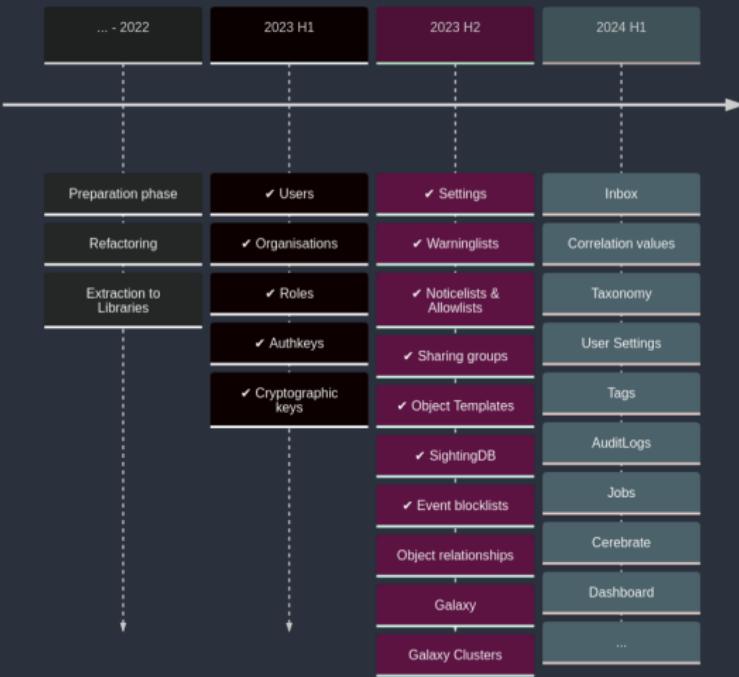

- No one-click update; manual script execution required
- Migration tools will be included in MISp 3 to help you
- This allows us to make underlying changes such as
 - ▶ Database changes
 - ▶ Libraries changes (e.g supervisor in favour of cake-resque)

> INSTALLATION FOR NEW INSTANCES

- Simplified installation based on package managers
- Upstream Docker installer
- OS targets: **Ubuntu** and **RHEL**

Model migration timeline

> OUR HOPES AND EXPECTATIONS FOR THE FIRST COMMUNITY

- We will list features marked for culling
 - ▶ If you're using any of them, please let us know!
- We will be launching a beta phase in the future
 - ▶ Feedback & improvements are more than welcome!
- Want to get involved?
 - ▶ 3.x branch - MISP/MISP/tree/3.x
 - ▶ Project for migration - github.com/orgs/MISP/projects/2
